

OSS4AI · VOICE AI TRACK

Tacit

*Institutional memory,
captured by conversation.*

A voice AI that interviews your departing experts before their knowledge walks out the door.

THE PROBLEM

Every expert who leaves takes a library with them.

10,000

Americans turn 65 every day

Source: Pew Research

\$31.5B

lost yearly by Fortune 500s to poor
knowledge sharing

Source: IDC

42%

of the skills a job needs are known
only by the person doing it

Source: Panopto, 2018

*The fix has always been “write the documentation.” Experts don’t.
But they will talk for an hour.*

Make the talking the documentation.

A closed loop: every conversation becomes cited knowledge, and every gap becomes the next question.

TACIT

I'm Tacit, here to capture your expertise for Jordan Reyes. When something's truly stuck, who do you call first — and why them?

When a garnishment order arrives I log it in the garnishment tracker the same day, because the state only gives us seven days to start withholding. Never enter it as a percentage in Workday, always as a fixed amount, otherwise a bonus run over-withholds and the employee calls HR. If two orders arrive for the same person, call Rosa in Legal before entering anything.

↳ 5 atoms captured

TACIT follow-up

Who are the unofficial experts — the people you'd call when the system or process fails — and why do they know what no one else does?

- 1 Speech-to-speech**
Boson Higgs Realtime: ~0.7 s responses, interruptions handled.
- 2 Atoms while talking**
Typed atoms appear while the expert is still speaking.
- 3 Live coverage map**
Fills in live and steers the interviewer toward what is still missing.
- 4 Can't die on stage**
Fallbacks: browser voice, or just type.

The successor asks. The twin answers, with receipts.

1 Grounded answers

Every claim carries a [n] citation back to the interview transcript.

2 Confidence gating

Low confidence? Tacit doesn't guess — the question is queued for the expert.

3 The expert's own voice

Answers are spoken in the expert's cloned voice (Higgs Audio).

4 Hybrid retrieval

BM25 + Qwen3 embeddings, fused with reciprocal rank fusion (RRF).

The screenshot displays the Tacit interface. On the left, a sidebar contains a search bar with the text 'nebius - Qwen3-30B-A3B-Instruct-2507', a 'Higgs Realtime' button, a 'Server' button, a 'Settings' gear icon, and a link to 'Open source - MIT'. The main area shows a list of sources under the heading 'Eastern 3'. Each source is a card with a numbered callout (1-6), a title, a description, and a confidence score of 86%.

- 1** **Decision** 86%
Friday rejections: same-day wire beats waiting
If a corrected ACH file cannot be resubmitted by 3:30pm on a Friday, pay the affected employees by same-day wire (about \$35 each). The fee is trivial compared with employees missing rent over a...
- 2** **Procedure** **Verified** 86%
First hour after an ACH rejection
1. Call the JPMorgan client service line (laminated card on Maria's desk, not the general number) and ask for the ACH desk. 2. Give them the file ID so they can hold the file. 3. Fix the offending record in...
- 3** **Procedure** **Verified** 86%
Build, approve and send the ACH file
1. Run the final payroll calc in Workday and generate the ACH file. 2. Upload it to the JPMorgan portal. 3. Approve as first approver; get the second approval from Treasury (usually Dan Okafor). 4. Submit...
- 4** **Contact** 86%
Contact: JPMorgan ACH desk (client service line)
Use the client service number on the laminated card at Maria's desk and ask for the ACH desk. Have the file ID ready so they can hold the file. The general number will not get you there in time.
- 5** **Gotcha** 86%
Two common ACH file failures
The ACH file most often fails for one of two reasons: a new hire's routing number was entered without its leading zero, or the file total exceeds the bank's daily limit after a bonus run because Treasury...
- 6** **Contact** 86%
Contact: Dan Okafor (Treasury) — ACH second approver
Dan Okafor in Treasury is the usual second approver for the ACH file. Line up a Treasury backup before payday if he is out.

Why voice, why now.

0.7 s

speech-to-speech round trip

Speech-to-speech got real

Higgs Realtime: ~0.7 s latency, 100+ languages, ~90% cheaper than incumbents. Interruption handling is what makes an interview feel human.

~1 s

per typed JSON turn

Models can structure speech reliably

Qwen3-class open models return typed JSON atoms in about a second, and per-turn cost is cents — so every answer can be structured as it is spoken.

4.1M

Americans turn 65 each year, 2024–2027

Peak 65 is here

The largest retirement wave in US history. Banking, utilities, manufacturing and the public sector are the most exposed.

The technology got good in the same window the people are leaving.

Wedge: HR offboarding — one capture per departing expert.

PRICING · PROPOSED

\$1,500 per capture

One departing expert: interviews, knowledge base, twin and handover document.

\$60k / yr enterprise platform

Unlimited captures, SSO, Confluence / Notion / SharePoint export, phone interviews.

BUYERS

CHRO / Head of L&D · COO / Ops leaders · Risk & compliance

CHANNELS

HRIS marketplaces (Workday, SAP SuccessFactors) · Big-4 advisory knowledge-transfer practices · Retirement-heavy sectors: banking, utilities, manufacturing, public sector

LAND, THEN EXPAND

Land

Pilot with 5 departing experts in 30 days

Expand

Every offboarding, on the enterprise platform

Every departure is a purchase trigger with a hard deadline.

● TAM · Knowledge-management software

≈ \$30B+ globally and growing double digits.

● SAM · Critical-expert departures, US

~400k per year in US enterprises (≈10% of ~4M retirements) × \$1,500 per capture ≈ \$600M a year, in the US alone.

● SOM · Year 3

2,000 enterprise captures a month ≈ \$36M ARR.

All figures are our estimates. SAM assumes roughly one in ten of ~4M annual US retirements is a critical expert, priced per capture only.

Built in one day, working end to end.

- Live demo at vnmoorthy.github.io/tacit
- Open source on GitHub, MIT — github.com/vnmoorthy/tacit
- Works with zero keys (offline brain + browser voice), and with Boson + Nebius keys
- Voice cloning; phone interviews via Twilio + LiveKit
- Two sample captures (a payroll lead and an SRE) with 38 atoms

NEXT 30 DAYS

- Three design partners: one bank, one utility, one manufacturer
- Inbound phone line for interviews
- Confluence export

THE ASK

Introductions to CHROs and COOs facing retirement waves.

Come talk to Maria's twin at our table.
